

EXTRACTION RATES AND ASH VALUES

The following **extraction rates** and **ash values** can be reached with our patented short milling system, considering that the grain must have a medium degree of hardness (medium to soft quality and not a hard- or durum wheat), with a minimum hectolitre weight of approximately 80 (1 litre = 0,80kg).

ASH (DRY BASE)	EXTRACTION RATE
480 – 500	approx. 15 – 25 %
500 – 600	approx. 15 – 20 %
600 – 650	approx. 15 – 20 %
800 – 850	approx. 05 – 10 %

Depending on the hectolitre weight, the extraction rate is approx. 70 – 75 %

1250 – 1600 approx. 04 – 06 %

Mix type 750 – 800 approx. 81 %

bran approx. 18 %

Instead of white flour, depending on the quality of the raw material, semolina can be produced up to 25 %.

The following **extraction rates** and **ash values** can be reached with our patented short milling system, considering that the grain must have a minimum hectolitre weight of approx. 73 (1 litre = 0,73kg).

ASH (DRY BASE)	EXTRACTION RATE
500	approx. 10 – 15 %
960	approx. 60 – 65 %
2500	approx. 04 – 05 %

Depending on the hectolitre weight, the extraction rate is approx. 80 – 82 %

bran approx. 18 %
